Claims

- A process of oxidizing starch wherein a root or tuber starch comprising at least 95 wt.% based on dry substance of the starch of amylopectin, or a derivative thereof, is treated with hydrogen peroxide in the presence of a catalyst, which catalyst comprises divalent copper ions.
- 2. A process according to claim 1, wherein the catalyst is a copper(II)chloride, copper(II)sulfate, copper(II)phosphate, copper(II)nitrate salt, copper(II) acetate salt, copper(II) bromide salt or a combination thereof.
- 3.\ A process according to any one of the preceding claims, wherein the catalyst is present in an amount ranging from about 5 ppb to about 5000 ppb, preferably from 100 to about 1000 ppb, on dry substance of starch.
- A process according to any one of the preceding claims, wherein the action of the divalent copper ions is enhanced by one or more of calcium, vanadium, manganese, iron or tungsten ions.
- A process according to any of the preceding claims, 5. wherein the starch is potato starch or tapioca starch.
- A process according to any one of the preceding claims, wherein the hydrogen peroxide is used in an amount ranging from 0.01 to 5.0 wt.%, preferably from 0.05 to 2.5 wt.% on dry substance of starch.
- 25 A process according to any one of the preceding claims, wherein the derivative of the starch is a cationic, anionic or amphoteric starch.
 - An oxidized starch obtainable by a process according 8. to any one of the preceding claims
- Use of an oxidized starch according to claim 8 as a 30 binder in paper coatings or surface sizings, as an adhesive, in warp yarn sizing, as a foating of glass fibers, as a blanket adhesive, and in a rasive paper or in food products.

Please amend claims 3-8 as follows:

- 3. (Amended) A process according to claim 1, wherein the catalyst is present in an amount ranging from about 5 ppb to about 5000 ppb, preferably from 100 ppb to about 1000 pbb, on dry substance of starch.
- 4. (Amended) A process according to claim 1, wherein the divalent copper ions are enhanced by one or more of calcium, vanadium, manganese, iron or tungsten ions.
- 5. (Amended) A process according to claim 1, wherein the starch is a potato starch or tapioca starch.
- 6. (Amended) A process according to claim 1, wherein the hydrogen peroxide is used in an amount ranging from 0.01 to 5.0 wt%, preferably from 0.05 to 2.5 wt%. on dry substance of starch.
- 7. (Amended) A process according to claim 1, wherein the derivative of the starch is a cationic, anionic or amphoteric starch.
- 8. (Amended) An oxidized starch obtainable by a process according to claim 1.

Please add new claims 11-18, as follows:

- 11. A binder in paper coatings or surface coatings comprising an oxidized starch according to claim 1.
 - 12. An adhesive comprising an oxidized starch according to claim 1.

Application No. 09/703,380 Filing Date: February 21, 2001 Docket No.: 294-98 PCT/US

Page 3

13. A warp yarn sizing comprising an oxidized starch according to claim 1.

Cont

- 14. A coating for glass fibers comprising an oxidized starch according to claim 1.
- 15. An abrasive paper additive comprising an oxidized starch according to claim 1.
- 16. A food product additive comprising an oxidized starch according to claim 1.
- 17. A blanket adhesive comprising an oxidized starch according to claim 1.
- 18. An emulsifying agent for an alkyl succinic anhydride, alkyl ketene dimer or alkyl isocyanate comprising an oxidized starch according to claim 1.

AFTER THE CLAIMS

Please insert, after the claims, on a separate sheet:

ABSTRACT

The invention relates a process of oxidizing starch wherein a root or tuber starch comprising at least 95 wt.% based on dry substance of the starch amylopectin, or a derivative thereof, is treated with hydrogen peroxide in the presence of a catalyst, which catalyst comprises divalent copper ions. The present invention further relates to an oxidizable starch obtainable by a process comprising treating a starch with

Application No. 09/763,380 Filing Date: February 21, 2001 Docket No.: 294-98 PCT/US

Page 4

hydrogen peroxide in the presence of a catalyst, which catalyst comprises divalent copper ions.

For convenience purposes, a copy of the Abstract is attached hereto on a separate sheet.

REMARKS

Applicants have undertaken to cancel claims 9 and 10, amend claims 3-8, and add new claims 11-18 in the above-identified application in order to remove improper multiple dependencies and conform to U.S. practice. No new matter has been added. In addition, headings and an abstract have been added to the specification.

Accordingly, entry hereof and examination on the merits are respectfully requested.

Respectfully submitted,

Lauren T. Emr
